St Joseph's—May 2016

MORGAN SINDALL

CONSTRUCTION INFRASTRUCTURE

Enabling works are now complete on site and these include the removal and relocation of play equipment and the relocation of staff parking as well as the permanent site office and compound set-up.

The "Muckshift" operation is now complete to the rear of the school and we have now cast the retaining wall base and completed the sheet piling works. We have now commenced the reinforced concrete walls to the retaining wall which should be completed within approx. 2 weeks. We will commence drainage works next week and commence foundations the following week, w/c 16/5/16.

The foundations are now complete to the front of the building ready for the steel installation.

JA Burke are a Midlands based ground works, civils and RC frame company working for the largest construction clients in the UK.

JA Burke undertake projects from £50k labour to £3m labour, plant and material schemes.

They have successfully completed the enabling works along with the foundation to the front extension. They have also completed the piling works and are now progressing the retaining wall, drainage and foundations to the rear of the building.

My name is Colin Ebenezer, Morgan Sindall Site Manager (07794 094078) and I would like to take this opportunity to thank both the school and the local neighbours for their patience and understanding during the initial works carried out on site. We have had some issues with "Rogue" delivery drivers who have driven over verges etc but I would extend our apologies over this and I have undertaken measures to minimise the risk of any repeats. The next major activity is the steel erection which is taking place over the Whitsun holiday to minimise any risk to pupils. This is a potentially noisy operation involving a crane and MEWPs along with steel deliveries however we will mitigate noise as much as we possibly can.

Looking ahead

Over the next few weeks we will be:

- ◆ Completing retaining walls
- ◆ Completing drainage
- ◆ Completing foundations
- ◆ Ducting and Service Diversions
- ◆ Steelwork (Robinson's)

MJ Robinson Structures
